

## Inspection

PROTECT YOUR EMPLOYERS AND EQUIPMENT WITH PROPER OVERHEAD CRANE AND HOIST INSPECTIONS GD Crane Electrical Service technicians know overhead bridge cranes, hoists and jib cranes inside and out. Their years of experience with equipment similar to yours help to identify and repair the 'weak links' in your equipment that could eventually lead to an expensive breakdown with downtime. GD Crane Electrical Service can provide you with a PM program that is matched to the use and environment your equipment is used within. We combine safety and inspections with lubrication and adjustment of mechanical parts such as brakes and limit switches. Worn parts are identified so you can purchase spares and plan their replacement when production allows. Proper frequent periodic inspections and routine maintenance will:- Increase the safety risk from possibility of equipment failures.- Reduce liability risk in case of equipment failure.- Lower short term costs by increasing equipment production while allowing for planned repairs.- Lower long term costs by extending equipment life.- Enable proper compliance with OSHA rules as well as industry standards.
